

## Review of Paramount Communications Films

Mammals, 1976 10 minutes (elementary)

HPV, snappy music

footage, although very pretty, mainly a backdrop for narration  
(and reading words superimposed on screen)

not too much science, and what there was, was not too rigorous  
EBEC film eg, contrasted mammals to other categories,  
while this one doesn't. result is that it is  
not as clear about what the subject is all about,  
why its important or relevant to have categories etc.
